## APSC 200 P2: Lesson Plan

Department of Mathematics and Engineering Queen's University

June 5, 2019

This document provides an outline as to what will be covered each week for the duration of the P2 project. The workshops are meant to be a work period for students and provide an opportunity to ask questions they may have about the project.

Table 1: P2 Project Schedule

Week 1			Table 1. F2 F10 ject Schedule
Workshop 1 Students will be researching area of application to use for project. Answer questions students may have regarding their application choice.  Workshop 2 Pitch Presentations. Each group must present during this workshop period.  Workshop 1 Provide a brief review to the algorithms available to the students. Answer questions students have regarding the mathematics of each algorithm or the proposal report. Note that students shouldn't be looking to transferring mathematics of algorithm to MATLAB yet.  Remind students that the proposal report is due by thee ned of the week.  Workshop 2 Provide a brief introduction to the MATLAB Primer available to the students to help them prepare for coding their simulation in Week 3. Answer questions relating to the project. Remind students that their proposal reports are due at the end of week.  Workshop 1 Answer questions regarding the MATLAB code or the project. Students will be working on code for the functions for the adjacency and Laplacian matrices. Remind students that the progress report is due at the end of the week.  Workshop 2 Answer questions regarding MATLAB or the project. Students will be working on code for the functions for the adjacency and Laplacian matrices. Remind students that the progress reports are due at the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. All groups will be developing some code to update agent position. Students will also be working on other portions of code depending on the algorithm being used.  Workshop 2 Answer questions regarding MATLAB or the project. Groups should be completing the core of code required for the simulations to run by the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. Students should begin working on their final reports for the project. Provide a reminder of what needs to be included in the report. Progress Report 2 will also be due.  Workshop 1 Answer questions regarding MATLAB code or the project. MATLAB programming should be completed by t	Week 1	Lecture	Introduce students to the P2 project. Provide a summary of each of the four algorithms available to the students to use for their project.
Workshop 2 Pitch Presentations. Each group must present during this workshop period.  Workshop 1 Provide a brief review to the algorithms available to the students. Answer questions students have regarding the mathematics of each algorithm or the proposal report. Note that students shouldn't be looking to transferring mathematics of algorithm to MATLAB yet. Remind students that the proposal report is due by the end of the week.  Workshop 2 Provide a brief introduction to the MATLAB Primer available to the students to help them prepare for coding their simulation in Week 3. Answer questions relating to the project. Remind students that their proposal reports are due at the end of week.  Workshop 1 Answer questions regarding the MATLAB code or the project. Students will be working on code for the functions for the adjacency and Laplacian matrices. Remin students that the first progress report is due at the end of the week.  Workshop 2 Answer questions regarding MATLAB or the project. Students will be working on code for the functions for the adjacency and Laplacian matrices. Remind students that the progress reports are due at the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. All groups will be developing some code to update agent position. Students will also be working on other portions of code depending on the algorithm being used.  Workshop 2 Answer questions regarding MATLAB or the project. Groups should be completing the core of code required for the simulations to run by the end of this week.  Workshop 2 Answer questions regarding MATLAB or the project. Students should be eigh working on their final reports for the project. Students should be developed to the simulations to run by the end of this week.  Workshop 2 Answer questions regarding MATLAB code or the project. Students should be working on their final reports for the project. MATLAB programming should be completed by the end of this week.  Answer questions regarding matrices for the project. Remind students to begin	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	Workshop 1	Students will be researching area of application to use for project.
Week 2 Workshop 1 Provide a brief review to the algorithms available to the students. Answer questions students have regarding the mathematics of each algorithm or the proposal report. Note that students shouldn't be looking to transferring mathematics of algorithm to MATLAB yet. Remind students that the proposal report is due by the end of the week.  Workshop 2 Provide a brief introduction to the MATLAB Primer available to the students to help them prepare for coding their simulation in Week 3. Answer questions relating to the project. Remind students that their proposal reports are due at the end of week.  Workshop 1 Answer questions regarding the MATLAB code or the project. Students will be working on code for the functions for the adjacency and Laplacian matrices. Remin students that the first progress report is due at the end of the week.  Workshop 2 Answer questions regarding MATLAB or the project. Students will be working on code for the functions for the adjacency and Laplacian matrices. Remind students that the progress reports are due at the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. All groups will be developing some code to update agent position. Students will also be working on other portions of code depending on the algorithm being used.  Workshop 2 Answer questions regarding MATLAB or the project. Groups should be completing the core of code required for the simulations to run by the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. Students should begin working on their final reports for the project. Students should begin working on their final reports for the project. MATLAB programming should be completed by the end of this week.  Workshop 1 Answer questions regarding MATLAB code or the project. Remind students to begin working on their final presentation in addition to their final report.		Workshop 2	
Answer questions students have regarding the mathematics of each algorithm or the proposal report. Note that students shouldn't be looking to transferring mathematics of algorithm to MATLAB yet. Remind students that the proposal report is due by the end of the week.    Workshop 2			period.
Students to help them prepare for coding their simulation in Week 3. Answer questions relating to the project. Remind students that their proposal reports are due at the end of week.  Workshop 1 Answer questions regarding the MATLAB code or the project. Students will be working on code for the functions for the adjacency and Laplacian matrices. Remin students that the first progress report is due at the end of the week.  Workshop 2 Answer questions regarding MATLAB or the project. Students will be working on code for the functions for the adjacency and Laplacian matrices. Remind students that the progress reports are due at the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. All groups will be developing some code to update agent position. Students will also be working on other portions of code depending on the algorithm being used.  Workshop 2 Answer questions regarding MATLAB or the project. Groups should be completing the core of code required for the simulations to run by the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. Students should begin working on their final reports for the project. Provide a reminder of what needs to be included in the report. Progress Report 2 will also be due.  Workshop 2 Answer questions regarding MATLAB code or the project. Students should be working on their final reports for the project. MATLAB programming should be completed by the end of this week.  Answer questions regarding MATLAB code or the project. Remind students to begin working on their final presentation in addition to their final report.	Week 2	Workshop 1	Answer questions students have regarding the mathematics of each algorithm or the proposal report. Note that students shouldn't be looking to transferring mathematics of algorithm to MATLAB yet.
will be working on code for the functions for the adjacency and Laplacian matrices. Remin students that the first progress report is due at the end of the week.  Workshop 2 Answer questions regarding MATLAB or the project. Students will be working on code for the functions for the adjacency and Laplacian matrices. Remind students that the progress reports are due at the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. All groups will be developing some code to update agent position. Students will also be working on other portions of code depending on the algorithm being used.  Workshop 2 Answer questions regarding MATLAB or the project. Groups should be completing the core of code required for the simulations to run by the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. Students should begin working on their final reports for the project. Provide a reminder of what needs to be included in the report. Progress Report 2 will also be due.  Workshop 2 Answer questions regarding MATLAB code or the project. Students should be working on their final reports for the project. MATLAB programming should be completed by the end of this week.  Workshop 1 Answer questions regarding MATLAB code or the project. Remind students to begin working on their final presentation in addition to their final report.		Workshop 2	students to help them prepare for coding their simulation in Week 3. Answer questions relating to the project. Remind students that their
be working on code for the functions for the adjacency and Laplacian matrices. Remind students that the progress reports are due at the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. All groups will be developing some code to update agent position. Students will also be working on other portions of code depending on the algorithm being used.  Workshop 2 Answer questions regarding MATLAB or the project. Groups should be completing the core of code required for the simulations to run by the end of this week.  Workshop 1 Answer questions regarding MATLAB or the project. Students should begin working on their final reports for the project. Provide a reminder of what needs to be included in the report. Progress Report 2 will also be due.  Workshop 2 Answer questions regarding MATLAB code or the project. Students should be working on their final reports for the project. MATLAB programming should be completed by the end of this week.  Workshop 1 Answer questions regarding MATLAB code or the project. Remind students to begin working on their final presentation in addition to their final report.	Week 3		will be working on code for the functions for the adjacency and Laplacian matrices. Remin students that the first progress report is due at the end of the week.
Week 5  be developing some code to update agent position. Students will also be working on other portions of code depending on the algorithm being used.  Workshop 2  Answer questions regarding MATLAB or the project. Groups should be completing the core of code required for the simulations to run by the end of this week.  Workshop 1  Answer questions regarding MATLAB or the project. Students should begin working on their final reports for the project. Provide a reminder of what needs to be included in the report. Progress Report 2 will also be due.  Workshop 2  Answer questions regarding MATLAB code or the project. Students should be working on their final reports for the project. MATLAB programming should be completed by the end of this week.  Week 6  Workshop 1  Answer questions regarding MATLAB code or the project. Remind students to begin working on their final presentation in addition to their final report.		Workshop 2	be working on code for the functions for the adjacency and Laplacian matrices. Remind students that the progress reports are due at the end
Week 5  Workshop 1  Workshop 1  Workshop 2  Workshop 2  Workshop 1  Workshop 1  Workshop 2  Workshop 1  Workshop 2  Workshop 1  Workshop 2  Answer questions regarding MATLAB or the project. Students should begin working on their final reports for the project. Provide a reminder of what needs to be included in the report. Progress Report 2 will also be due.  Workshop 2  Answer questions regarding MATLAB code or the project. Students should be working on their final reports for the project. MATLAB programming should be completed by the end of this week.  Workshop 1  Answer questions regarding MATLAB code or the project. Remind students to begin working on their final presentation in addition to their final report.	Week 4	Workshop 1	be developing some code to update agent position. Students will also be working on other portions of code depending on the algorithm being
begin working on their final reports for the project. Provide a reminder of what needs to be included in the report. Progress Report 2 will also be due.  Workshop 2 Answer questions regarding MATLAB code or the project. Students should be working on their final reports for the project. MATLAB programming should be completed by the end of this week.  Workshop 1 Answer questions regarding MATLAB code or the project. Remind students to begin working on their final presentation in addition to their final report.			completing the core of code required for the simulations to run by the end of this week.
should be working on their final reports for the project. MATLAB programming should be completed by the end of this week.  Week 6  Workshop 1  Answer questions regarding MATLAB code or the project. Remind students to begin working on their final presentation in addition to their final report.	Week 5		begin working on their final reports for the project. Provide a reminder of what needs to be included in the report. Progress Report 2 will also
students to begin working on their final presentation in addition to their final report.			should be working on their final reports for the project. MATLAB programming should be completed by the end of this week.
Workshop 2   Answer any remaining questions about the final report or presentation.	Week 6		students to begin working on their final presentation in addition to their final report.
		Workshop 2	Answer any remaining questions about the final report or presentation.
